Athletic Fields

School Yards

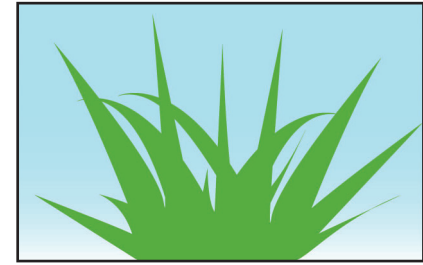

Parks and Recreational Areas

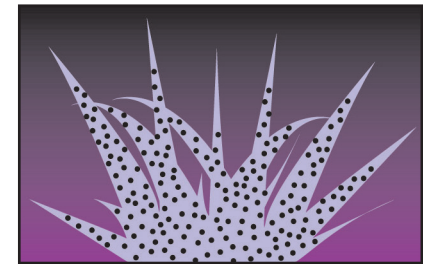

Residential Areas

## How does FlightControl® Plus Work?

Turf treated with FlightControl® Plus under normal light

Turf treated with FlightControl® Plus under ultraviolet light

## The Threat With Consequence

- Geese feed on treated turf and experience a **harmless**, but **effective intestinal reaction**.
- Geese also can see the compound in the ultraviolet spectrum of light (which people cannot see).
- Geese become conditioned to avoid treated areas and find new feeding sites away from your treated turf. The visual warning along with the mild intestinal reaction equals **a threat with consequence**.
- Requires 5 to 6 treatments per year depending on your geographic area.
